

Lipfty - Physical Play Instructions

Two ways to play on a standard 8 x 8 draughts/checkers or chess board: full **Lipfty** and compact **Lipfty24**. Pieces are shared - neither player owns a colour.

At a glance

Lipfty24 needs only 24 ordinary draughts/checkers pieces. **Full Lipfty** uses the same 24 ordinary pieces plus eight clearly distinguishable special pieces.

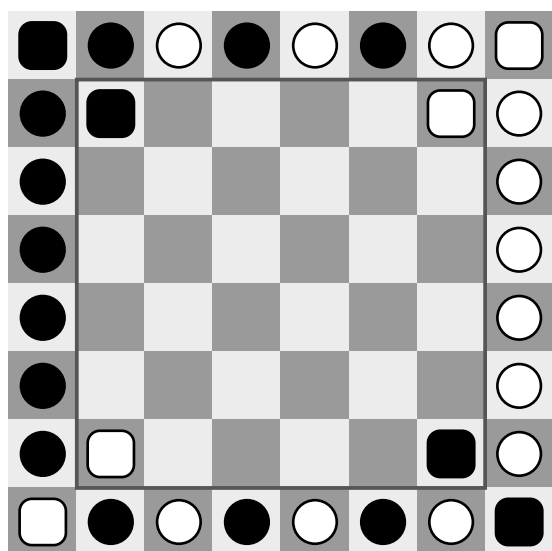

What you need

- **A standard 8 x 8 board.** The inner 6 x 6 is the playing area; the outside ring is the reserve.
- **24 ordinary pieces:** 12 Black and 12 White draughts/checkers pieces.
- **For full Lipfty only:** 8 special pieces - 4 Black and 4 White. In a purpose-made Lipfty set these are square (or gently rounded-square) pieces so they are instantly different from the ordinary round pieces.

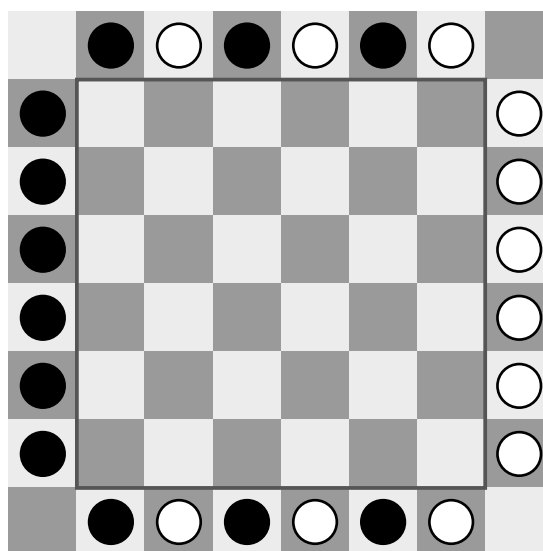

Improvised special pieces

The eight special Lipfty pieces can be represented by anything convenient, for example **small pieces of paper or card marked in some way to represent Black and White**, provided the two colours can be clearly distinguished from each other and from the ordinary draughts pieces. For example, use **4 black pawns and 4 white pawns from a chess set**, or use **8 coins with heads representing Black and tails representing White**.

Set up the board

Full Lipfty

Lipfty24

Full Lipfty: Put four special pieces on the four corners of the inner 6 x 6, with matching colours diagonally opposite. These are the **Opening Four**. Put the 24 ordinary pieces around the non-corner positions of the outer ring, 12 Black and 12 White, in any order. Put the remaining four special pieces in the four outer corners, two Black and two White, in any order. These four are the **Final Four**.

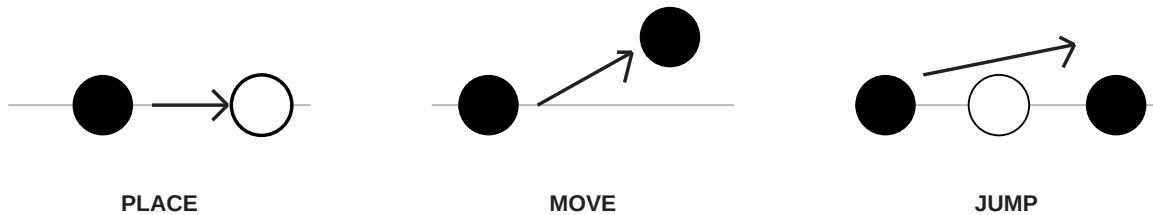

Lipfty24: Leave the inner 6 x 6 empty. Put the 24 ordinary pieces around the non-corner positions of the outer ring, 12 Black and 12 White, in any order. Leave all four outer corners empty. There is no Opening Four and no Final Four.

How a turn works

Choose the starting player by agreement or any fair random method. The **other player** chooses an actual ordinary reserve piece and hands it to the starter. The colour of that handed piece is the colour the starter must use. After each normal turn, the player who has just completed the turn chooses an actual remaining reserve piece and hands it to the opponent.

Important

The pieces are shared. A Black piece is not "Black player's piece" and a White piece is not "White player's piece". The handed piece simply tells the receiver which colour must be used for that turn.

Place

Place the handed reserve piece on any empty square in the inner 6 x 6. **Learning** uses Place only. In Standard and Extreme, Place is always available.

Move - Standard and Extreme

Instead of placing the handed piece, move one movable board piece of the handed colour exactly **one adjacent square** horizontally, vertically or diagonally into an empty square. Keep hold of the reserve piece you were handed.

- In full Lipfty, the four Opening Four pieces are pinned: they count towards wins but can never Move or Jump and can never be jumped over.
- You may not Move or Jump the exact board piece your opponent moved on their immediately preceding turn.

Move consequence: after making the Move, choose a **different** available reserve piece for your opponent to place. If that placement does not win, place the reserve piece you were originally handed. The opponent then takes the next normal turn.

Jump - Standard and Extreme

Instead of placing the handed piece, use a movable board piece of the handed colour to leap over one adjacent **opposite-colour** movable piece into the empty square immediately beyond. The Jump may be horizontal, vertical or diagonal. There are no multi-jumps. Keep hold of the reserve piece you were handed.

Jump consequence: lift the exact piece that was jumped over and give it to your opponent, who redeploys it on any empty square. If that does not win, place the reserve piece you were originally handed. The opponent then takes the next normal turn.

Immediate win

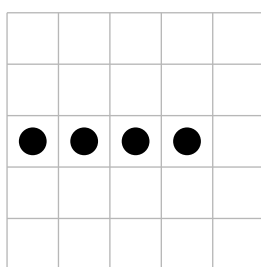

If a Move or Jump itself makes a winning pattern, the game ends immediately. Do not carry out the consequence after a winning Move or Jump.

Choose a game version

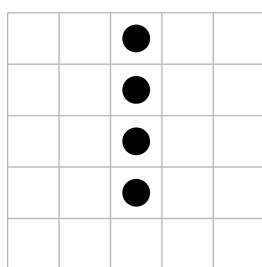

The same three versions are available in both Lipfty and Lipfty24.

Version	Winning patterns	Actions
Learning	Four in a horizontal, vertical or diagonal line.	Place only.
Standard	Four in a horizontal, vertical or diagonal line.	Place, Move and Jump.
Extreme	Standard line wins, plus tight and spaced board-aligned Squares.	Place, Move and Jump.

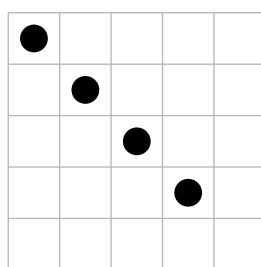

Winning patterns

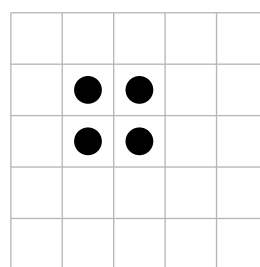

Horizontal

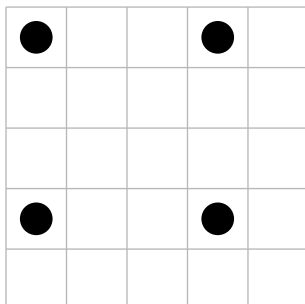

Vertical

Diagonal

Tight Square

Spaced Square

Extreme only - spaced Square: four pieces of the same colour at the corners of a larger square whose sides follow the board rows and columns. The four corners may be separated by one or more squares. A tight 2 x 2 square is also a win. Diamond-shaped squares are not used.

A winning piece can be any piece of that colour

Ordinary pieces and, in full Lipfty, special pieces all count normally towards winning patterns. The Opening Four are special only because they are pinned; they still count towards a win.

When to check for a win

Check immediately after every placement, Move, Jump, Jump redeployment, held-piece placement and (in full Lipfty) Final Four placement. As soon as a winning pattern exists, the game ends.

Finishing the game

One-colour finish

As soon as either ordinary reserve colour is exhausted, **Move and Jump stop completely**. From then on, the remaining ordinary reserve pieces are placed one per normal turn until the ordinary reserve is empty. If a two-placement Move consequence has already started, finish that consequence first.

Full Lipfty - Final Four

When all 24 ordinary reserve pieces have been used, the four special pieces waiting in the outer corners become the **Final Four**. They are now available one at a time. On each turn, choose one remaining Final Four piece and place it on any empty square. Final Four is placement-only. If all four are placed without a win, the game is a draw.

Lipfty24 - no Final Four

Lipfty24 ends when all 24 ordinary pieces have been used. If nobody has made a winning pattern, the game is a draw.

Quick reference

Situation	What happens
Start of game	Choose starter. The opponent chooses the first ordinary reserve piece and hands it to the starter.
Normal turn	Use the handed colour: Place, or in Standard/Extreme make a legal Move or Jump.
After a normal Place	The player who just played chooses an actual remaining reserve piece for the opponent.
After a Move	Mover chooses a different reserve piece for opponent to place; if no win, mover places the originally handed piece.
After a Jump	Opponent redeploys the exact jumped piece; if no win, jumper places the originally handed piece.
One reserve colour gone	No more Move or Jump. Placement only until ordinary reserve is empty.
Full Lipfty reserve empty	Play the four Final Four special pieces, one per turn, placement only.
Lipfty24 reserve empty	Draw if there is no winner.

Physical set design

For a purpose-made Lipfty set, the 24 ordinary pieces are round and the 8 special pieces are square. The square shape is a visual identifier, not an extra rule. If you do not have square pieces, any clearly distinguishable substitute works.

Have fun playing Lipfty.
